

Cost Per Weld™

Huys' *Cost Per Weld Program* is a unique service designed to save customers money through the analysis and improvement of welding and purchasing practices.

Since resistance welding is fast, inexpensive, and relatively simple, it has been adopted by many industries. Its widespread success has led to complacency about its costs and processes. Huys' technicians, chartered accountants, and weld engineers work together to identify both cost reduction and process improvement opportunities.

How Does it Work?

- Designed to study costs associated with each weld/process, and to suggest how they can be reduced
- Overall objective is to identify, process, and then ultimately try and solve problems
- Customer decides overall objectives and size of review, cost reduction goals, and extent of welding process changes sought
- Huys staff work with your staff to achieve savings through welding process changes, equipment changes and/or consumable modifications
- Creates opportunities to mentor and train production/maintenance departments
- Every program is confidential and tailored for that company

With clear direction and objectives from the customer, Huys can use our financial expertise, engineering knowledge, and flexible manufacturing processes to provide real solutions to problems.
